Mr. J. R. Magness,  
Head Horticulturist in Charge,  
U.S. Department of Agriculture,  
Washington, D.C.

Attn: M.R.N.

Dear Sir:-

Referring further to your letter of January 3rd,  
we are now enclosing herewith copy of the latest "Seed Belt  
News" which will give you today's prices on the various grasses,  
clovers, etc. which we handle.

Yours very truly,

THE BELT SEED COMPANY INC.

**"THE GOOD NEIGHBOR IN PRACTICE INSTEAD OF THEORY"**

We quote below a letter addressed by one Penna. County Agent to the dealers in his county with regard to the use of Argentine Alfalfa which seems to make good for all the Middle Atlantic Territory.

"Dear Dealer:-

No doubt your customers will ask you about Argentine alfalfa seed. Since the price is about ten dollars less than good domestic seed, there is every reason to expect that some farmers will buy the cheaper seed.

In the tests made at the Pennsylvania Experiment Station in comparison with other sources, the Argentine seed was not too dependable. Some lots produced a satisfactory crop while others did not.

For that reason we are making the recommendation that farmers should not make straight seedings, but that the Argentine should be mixed with good North-western Common alfalfa seed. For many farms where a straight seeding of alfalfa is not necessary, it is a good practice to put red clover and also alsyke in the mixture.

Three parts alfalfa, two parts of red clover and one part alsyke are sometimes used."

Yours truly—  
County Agent.

E. D. WHITE, ASSISTANT CHIEF, AAA,  
BEFORE AMERICAN SEED TRADE ASSOCIATION,  
CHICAGO, JANUARY 19, 1942

"Generally speaking the seed needs for this country in 1942 will be somewhat above normal. The plans call for as much as 50% production increase for some states, no increase in others and slight decreases in a few.

To be more specific, Alsyke, Sweet Clover, Timothy, Alfalfa, Lespedeza and Red Clover are the principal hay and pasture legumes and grasses for which there is a heavy domestic and some foreign demand, including Lend-Lease. Best estimates now indicate that the supplies available for domestic use this year will be about 468 million pounds, compared with an average domestic disappearance of 440 million pounds during the period 1936 to '40, and 518 million pounds last year. Consequently, these seeds will have to be used conservatively -- especially Alfalfa, Red Clover and Timothy. Drought decreased the 1941 acreage of hay and pasture crops in the Northeastern States, and demand may be above normal in these areas.

The United States production goal in 1942 for hay crop seeds is 4,919,000 acres, or 25% more than the 3,923,000 planted in 1941. That, as you know, is a big order.

Lend-Lease requirements in 1942 for Clovers, Alfalfa and Timothy will probably be somewhat greater than the 14,100,000 pounds exported in 1941."
